

Airserver

Display iPad Screens On Your Computer

USING AIRSERVER

STEP ONE

Make sure the Airserver program is running on your computer. You can find it under START->All Programs->Airserver.

STEP TWO

On your iPad, double press the home button until your programs list pops up, then swipe right until you see the music controls.

STEP THREE

Tap on the Airplay icon and then select your computer. Turn mirroring on. You can now display your iPad screen.

STEP FOUR

When you are finished, go back to Airplay on your iPad, and tap on iPad to turn off the mirroring.

SET PASSWORD

I strongly recommend setting a password to prevent other classes from accidentally taking over your screen.

WIFI NETWORK

For your iPads to talk to the computer, they both need to be on the MTBE wifi network.

AIRSERVER TIPS

STEP ONE Airserver Icon

STEP TWO Music Controls

STEP THREE Airplay Menu

STEP FOUR Turn Mirroring Off - Select iPad

AIRSERVER TIPS

Remember that students can share what they do on the iPads using Airserver as well. Have students demonstrate apps, concepts, and projects!

 AirServer

Transform the classroom

CREATED BY MEREDITH MARTIN @GEEKYTTEACH

While Airserver usually works fine, it can sometimes crash or freeze. If you do not see your computer name on the Airplay list of the iPads, simply restart Airserver on your computer.
