

Math Duel

Two Player Math Review App

USING MATHDUEL

STEP ONE

Launch the app and start a new game. The screen will be split and oriented for two players to use it at the same time. They will compete to answer math questions (different for each one) in order to win the game.

STEP TWO

Tap the SETTINGS button to change the operations and difficulty for each player. This is a great way to provide differentiation as you can individualize the playing mode for each student!

STEP THREE

Students compete in real time (no need to hand off the iPad to each other) to solve the most problems in the shortest amount of time.

SET COLOR

On the SETTINGS menu, you can select different colors for each student. Just tap COLOR until you find the one you want.

SET #TERMS

The SETTINGS menu also allows you to set how many terms are used - anywhere from two (1+2) to five (1+2+3+4+5).

STEP THREE

Students Compete To Solve Math Facts

MATH DUEL TIPS

This app is great as a basic math skills review. The competition aspect engages students and encourages them to study more.

Split Screen Math Fun
