

Endless Reader App

Learn Words and Letter Sounds

Endless Reader is a fabulous app for beginning readers. This colorful, kid-friendly app takes students on a journey through the alphabet and teaches them letter sounds, words, and meaning through context. Students pick a letter, and have a word beginning with that letter read to them. They then have to spell it using letters on the page, which will say their sounds when selected. When the word is created, students can have it used in a sentence, with a cute animation acting out the sentence. The app comes with letters A-F active, and more available through in-app purchase.

Classroom Connection

Working with kindergarten or English language learners? This app is a great way to introduce them to letter sounds and sight words. Have students practice with the app, then write out the words on their own and illustrate them. Older students can work on creating new sentences using the words they made in the app.
