# Fotobabble App

Create Audio Stories

Fotobabble is a great app and website. The app is designed for the iPhone, but works on the iPad as well. You simple need to search for it under the Phone apps. With Fotobabble, students upload a photo, and then record their story using the app. While the default recording time is one minute, you can select up to 5 minutes of recording time in the settings. Finished recordings can be uploaded to the Fotobabble website for easy sharing. You can choose whether uploaded projects are public or private. This is a great way for students to create book reviews, retell stories, and much much more.

Classroom Connection

Teachers should create an account on the Fotobabble website for their class. Students can log into the app with that account so that all their creations will be under the class account. They can work on using the app to retell their classroom reading assignments, create book reviews or trailers, record their reports, and more. Be sure to have students set all projects to PRIVATE before uploading. Teachers can then choose who to share the links with.
