

# Virtual Manipulatives App

Explore Fractions, Decimals, & Percents

ABCya's virtual manipulative app is a great tool for any math classroom. This app allows students to easily visualize fractions, decimals, and percents, and to see the relationships between them. The visual interface and ability to move and select items makes this app a valuable tool for students struggling to comprehend these math skills. Students can tap and hold an item to see an equivalent amount pop up, and they can also use the pencil tool to draw on the screen. If you are looking for a user friendly support tool for these math skills, this app is for you.

## Classroom Connection

This app is great for students struggling with the relationships between fractions, decimals, and percents. With this app they can build math problems and easily see relationships. Have students use as visual aid when solving problems. Students can also annotate the screen as they work, and save a screenshot to add to their notes or portfolio.
