

# King of Math App

A fun, leveled math game

King of Math is a great math review app. Students start as farmers, and choose a math level/topic to start from. As they work through the levels, they gain points and get new positions. The goal is to become the King of Math. The math topics include: Addition, Subtraction, Mixed 1, Multiplication, Division, Arithmetic, Geometry, Fractions, Powers, Statistics, Equations, and Mixed 2. In addition to gaining job levels, students can also earn medals for achievements.

## Classroom Connection

This app is great as a review of different math problems. Most of the questions are geared for middle school and junior high level, so it can be used as an enrichment or extension activity. Students can challenge themselves to beat their own high scores, or compete against others in their class.
